

# ENDANGERED ANIMAL RESEARCH

*My Endangered animal is -*

Which habitat does your animal live in and in which continent is it mostly found?

Why is your chosen animal endangered? What are the KEY problems faced by it?

Can you find out some facts and figures about your animal?

(How many left in the wild, how much of their natural habitat remains etc)

What is special about your animal?

What level of threat is your animal under?

Vulnerable,

Endangered,

Critically Endangered,

Extinct in the Wild

HOW can your animal be saved? What steps NEED to be taken?

Do you have anything else that will make your argument stand out?

Draw an Image of your animal in its habitat (We could use it in a video..)
